Report

As regulations one of the Best practices of our college is "TED Talk" which is been conducted for the all M.Sc (CS) Students. This activity was held on 1st July 2023 in Computer Laboratory at 12:15pm. The topic of the Talk was chosen based on their domain and the academic concept. This intern help them to have the knowledge about the rapid growth in tech field and vast use of digital equipments. The subject called Artificial Intelligence has been allotted for them in their academic syllabus. Well they must have the clear idea about what it is, why to learn, and what all the key factors it makes them to learn on this regards.

Based on this genuine intension we have chosen the two relevant Talks on AI. They convey message about

- 1) How AI could help in replacement of any organ it's just one device example was explained with demo on paralyzed patient . even the working of that device and its logical connectivity explained them about how once device can be implemented based on fulfilling the ground level need and requirements.
- 2) It has given them clear picture of technological changes and compact use of computers from decades to another decade. It clearly shows that, still more compactness yet to come to reach the invisibility. And students analyzed on both videos that how one is depended on the technology and being CS professionalism at what extent they must think to develop the another model of AI devices.
