DEPARTMENT OF BOTANY

PLANT QR CODING

Plant QR Coding is a unique way of accessing plants information. All plants have their own unique code. QR codes are like barcodes by which anyone can scan with their phone to access more information about the plants. Plant QR coding is one of the best practices of the department of botany, Eco-Club. QR codes are barcodes that can be read by mobile phone (smart phone) cameras. We have created a QR code for 114 plants in our college campus. Each QR code gives access to a 'Plant Information' webpage of complete details for that plant. Smartphone users scan the QR Code which automatically takes them to the webpage of that plant. While the world seems to be going digital, people lack the time to read books. Hence, The Department of Botany, S.B Arts And K.C.P Science College, vijayapur has decided to exploit the rapidly growing platform for a unique purpose. Students on the lush green campus were seen using their phones to scan QR codes hung on the trees for its information. These codes give students all the information they need to know about the tree from its scientific name to its medicinal value. They only need to put their smart phones to use. To keep up with the digital trend, we collected the database of all the trees in the college and assigned QR codes to them, making it easier for everybody to learn about a plant or a tree at the tip of their fingers. We see a lot of students, teachers and even visitors extracting information about the trees via the QR codes. With the installation of QR codes, gaining knowledge about the trees has become easier as it helps us save time and effort that is required to scan books at the library for the same purpose. And now we are looking forward to name some more plants in the upcoming days.
